KNEETEK[®]
Intelligent Knee Protection

Klaus Bachmann
Company owner and
member of the standards committee
for PPE / department knee-protection

*Protect more effectively,
work more comfortably,
live healthier!*

Dear Reader,

for many years KNEETEK has specialized in developing high quality protection systems for knees, that make working in a kneeling position even more comfortable, safer and effective.

We are proud to be one of the first European companies to offer you knee pads that are certified according to EN 14404.

Make use of the following advantages

- 1. unbeatable comfort of wear and extreme durability,**
- 2. professional protection from accidents and work-related illness,**
- 3. certified quality for the highest measure of protection.**

You too can profit from KNEETEK's Intelligent Knee Protection!

Kind regards
Klaus Bachmann

PS: Put us to the test and satisfy yourself on the high quality
and effectiveness of our knee protection systems!

THE PERFECT SOLUTION FOR EVERY NEED!

KNEETEK produces and sells complex knee protection systems that suit every demanding and professional user! We present a unique and competent assortment of products to you, from high-grade professional quality to outstanding premium products. Production of 'PRIVATE LABELS' and special orders are no problem for our knee protection experts. Make use of our knowledge and talk to us!

GUIDE ON KNEE PROTECTION

EN 14404 / PPE / INDUSTRIAL PROTECTION
ALL THE PRINCIPAL INFORMATION

THE PROBLEM

The knee: known problem area in work and at home

DON'T BEND YOUR KNEES RIGHT NOW, BECAUSE ...

According to statistics in 2005 there were more than 75.000 reported work-related accidents only in Germany involving knee joints. Next to acute injuries, the risk of developing chronic disorders is particularly high, which leads to the impairment of muscles, tendons, cartilage, bursas and joints.

In certain professions the majority of employees now suffer with knee complaints.

Professions with increased need for knee pads:

- Blacksmiths
- Boat builders
- Builders
- Carpenters
- Carpet and floor fitters
- Decorators
- Electricians
- Heating + ventilation engineers
- Interior decorators
- Joiners
- Landscape and garden workers / designers
- Loader in ground handling
- Mechanical engineers and vehicle builders
- Mechanics and fitters
- Metal workers
- Parquet and laminate fitters
- Pavers
- Roofers
- Scaffolders
- Tilers
- and many more

Furthermore, damaged knees have become a disorder that is spreading throughout the whole population. This highlights the need for active prevention and the requirement for knee protection systems in many work and private areas.

... INTOLERABLE CONDITIONS ...

The subject of knee protection has been woefully neglected so far. But an increasing consciousness in national and international occupational health and safety bodies has led to the formulation of standardized minimum requirements (EN 14404) and their incorporation into the PPE catalogue.

Despite this, an analysis of existing knee protection products is alarming: Most knee pads on the market today show a multitude of serious weaknesses. Some models will provide protection, but are uncomfortable, difficult to use or have other flaws.

Typical flaws and problems of many knee protection products

Usually there are at least 3 (often more) of the following flaws present::

- uncomfortable wear, pressure points
- cutting into the back of the knee, interruption of circulation due to straps being too thin
- mediocre insulation
- rigid construction with little elasticity, uncomfortable
- impeding movement and awkward when standing
- existing standards and safety regulations are rarely adhered to
- little protection from cold and moisture
- rapid sweating under the pads
- quick wear and tear

Result: Many pads are so user-unfriendly, that they are only worn reluctantly (if at all).

THE SOLUTION

... FINALLY AN INTELLIGENT SOLUTION EXISTS!

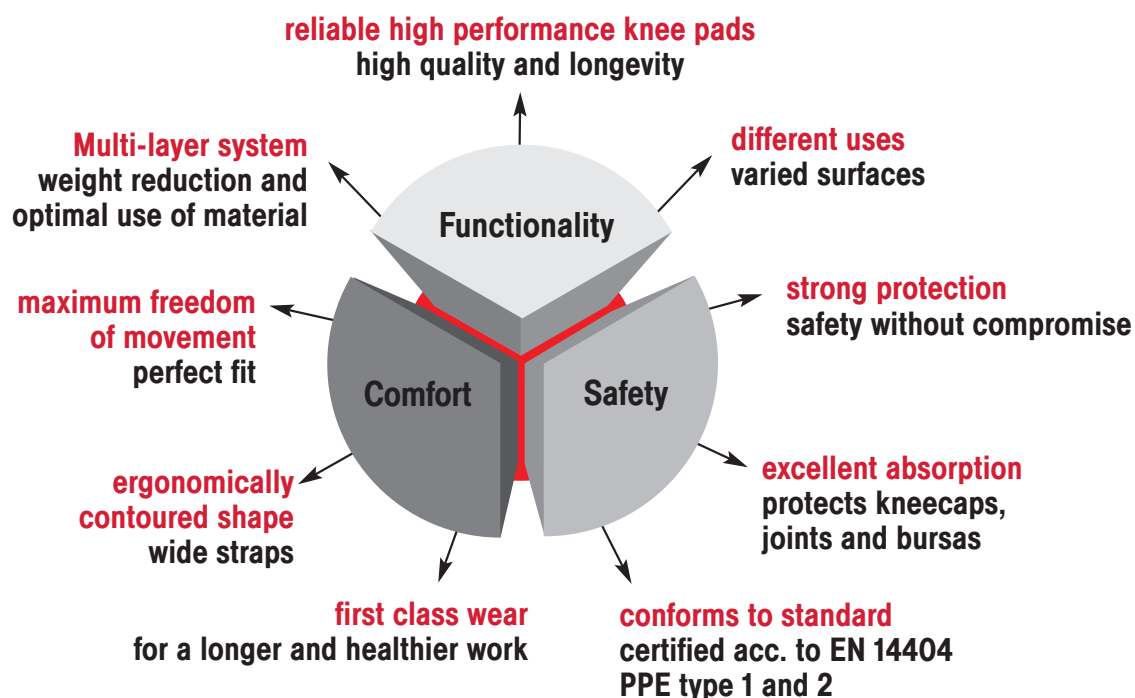

KNEETEK has specialised in the development of high-quality knee protection systems for years, and has a good standing among experts in this field.

Ideas and wishes for an ideal knee pad have been directly integrated into product development by incorporating craftsmen and people from relevant industries and trades. Innovative engineering, experimental use of the most modern materials and extensive tests in practical operations have led to the best possible outcome.

The result: knee pads that have been well thought through, perform well and in practice, conform to the highest requirements of functionality, comfort and safety.

KNEETEK - the intelligent way of protecting your knees!

FUNCTIONAL!

VERY EFFECTIVE HIGH-LEVEL PRODUCTS ...

Professionals swear by their excellent quality and functionality! The best absorption characteristics and high level of resistance. Reliability and longevity, even under extreme conditions! Functionality, safety and comfort of wear to increase productivity and stamina.

... FOR DIFFERENT USES

Special tasks require special solutions! There are knee pads with specific coatings for varying uses. Whether on tiles, wood, stone, metal or sensitive surfaces, the coating structure of the pad is perfectly attuned to the different surfaces (able to glide, non-slip, frictional resistance, etc.).

for working on smooth
and sensitive surfaces

KEVLAR^{SOFT}

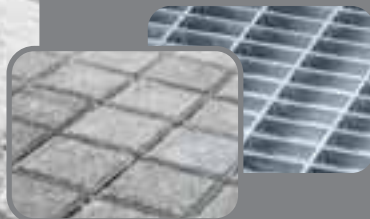

Ideal for i.e.:

- Parquet and laminate fitters
- Carpet and floor fitters
- Joiners • Carpenters
- Loaders in ground handling
- Decorators and many more

for working on very hard
and rough surfaces

KEVLAR

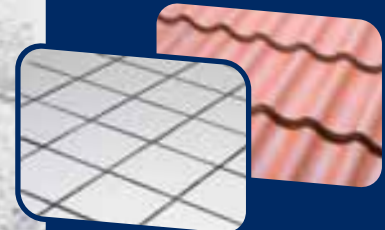

Ideal for i.e.:

- Plasterers
- Garden and landscape workers
- Roofers (flat roofs)
- Mechanics and fitters
- Metal workers and many more

for universal use
very non-slip

POLY

Ideal for i.e.:

- Tilers • Roofers
- Scaffolders • Builders
- Mechanics and fitters
- Metal workers and many more

SAFE!

PROTECTION ACCORDING TO STANDARDS ...

Certainly one of the most thought-through and reliable knee protection concepts available. In contrast to many other knee pads, KNEETEK products are certified according to EN 14404. This creates the maximum working safety for users and ensures legal compliance for traders and employers!

EN 14404 is the technical standard for knee protection, and has been in effect since 01.02.2005. Amongst others the standard defines the dimensions of zones of protection, penetration resistance, force distribution and the peak transmitted force in impact. The knee protection has to be comfortable and wearable, must have user-friendly fittings and has to satisfy many other safety criteria. **More on the subject in the guide on knee protection on page 34.**

... FOR HEALTHIER WORKING!

Active prevention and alleviation of already existing complaints! Makes it possible to work longer and problem-free! Prevents knee injuries and wear and tear. Protects and looks after knee caps, tendons, joints, cartilages and bursas and minimizes the danger of interrupted circulation.

COMFORTABLE!

HIGHEST COMFORT DURING USE ...

Have millstone round your 'knee'? No thank you! The best wearability whilst having optimal freedom of movement! They fit perfectly and do not slip, extra width on the straps prevents them from cutting into the back of the knee! Highly flexible Comfort-Knee-Pads that are so comfy to wear that the protection stays where it should: on your knee!

... AND OTHER OUTSTANDING CHARACTERISTICS!

Reduced weight due to a multi-layer system - clever combinations of high-quality materials and best workmanship. Whether you are kneeling, standing or walking; you will hardly notice wearing the KNEETEK knee pads!

THE PROFILINE SERIES

KNEE PROTECTION PROFESSIONALS CAN RELY ON 100%!

With the certified (according to EN 14404) knee pads of the series **PROFILINE** we present a hardwearing and effective professional knee protection for those who have to kneel very often or for long periods. Due to the user-orientated product development we can guarantee extremely high efficiency even under strong and frequent strain!

Among the main advantages are the comfortable lightweight construction and the excellent absorption characteristics. The comfort of wear lightens work , increases stamina and efficiency of the user.

The formation of pressure areas is avoided through the flexible construction, which also ensures a maximum freedom of movement. All pads of the **PROFILINE** series quickly adjust to the shape of the individual's knee.

The unique Neoprene®-lining is covered in skin friendly Lycra® and protects from cold and moisture. All **PROFILINE** pads can be worn directly on the skin without problems.

The wide elasticated straps will not cut into the back of the knee and therefore support a undisturbed circulation. High quality Velcro® fasteners ensure that the pads are fully adjustable.

"The Multi-talented One"

Efficiency and functionality are in the fore with PROFILINE-POLY. The special non-slip polyurethane coating gives it the necessary 'grip' needed by all users, that prefer strong contact with the floor.

Its many applications and the outstanding comfort of wear make the PROFILINE-POLY an excellent all-round knee pad!

One size fits all, washable up to 30°C (do not tumble dry)

KNEETEK-FEEDBACK

Sebastian Grebe
master tiler

“... I can warmly recommend them!”

“As a tiler I am constantly on my knees on cold and hard surfaces, I have tried many different types of knee pads. This was often disappointing and has downright annoyed me... ..many pads are simply too hard, slip constantly down or cut into the back of the knee... ..I did often ask myself, why there was nothing better available, until a colleague pointed out the KNEETEK products to me...

...I noticed the difference the first time I tried them on. A completely different feeling... ..the whole pad is flexible, surrounds the whole leg and fits nicely even when walking!

... in winter the Neoprene® protects from cold and moisture, because building sites are very rarely heated sufficiently... ..I can honestly and warmly recommend the pads from KNEETEK!”

Roland Klampfl
Safety and Occupational Health
Co-ordinator and Entrepreneur

Expert opinion:

“It is necessary for the safety and occupational health of employees as well as that of self-employed people, to proceed sensitively and with circumspection when choosing personal protection gear. The deciding factors are a high degree of protection, an ergonomical shape as well as longevity, all within an appropriate price/performance ratio. The KNEETEK products all possess the deciding characteristics for optimal protection of the knee joints; they enable you to work both pain free and without fatigue when being forced to kneel for long periods of time and without causing collection of fluids in the lower extremities. I could personally satisfy myself of these qualities when installing grates and I received only positive feedback from several trainees in various professions.”

THE SAFETEK SERIES

THE BEST THING THAT COULD HAPPEN TO YOUR KNEES!

With the extremely comfortable **SAFETEK**-knee pads you will experience a new dimension of knee protection! These industrial strength knee pads are the result of long years of user-orientated product development and the positive characteristics are without comparison.

The unique form promotes an incomparably comfortable wear. The pads fit perfectly due to their ergonomically contoured shape; they adjust to all movements and you will hardly notice that you are wearing them!

The first-class absorption characteristics increase efficiency and allow healthier working with less complaints.

The pads can be worn directly on your skin without any problems. The elastic Neoprene® lining surrounds the whole knee area and protects it perfectly against cold and moisture.

All products of the **SAFETEK** series convince through their high quality and longevity. An absolute 'must' for all health-conscious professionals and discriminating craftsmen!

Art.: 60005

KNEE CUSHIONS FOR WORKING TROUSERS

On the following pages, as an addition to our knee pad programme, we will present to you both tried and tested as well as newly developed knee cushion inserts for working trousers.

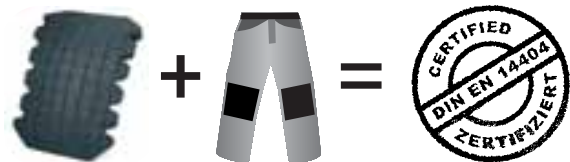

The advantages of these light-weight knee cushions will be brought to bear where the user does not kneel for long periods of time and consequently the knee joints are not put under high strain.

All KNEETEK knee cushions distinguish themselves through great comfort, high absorption characteristics and the ability to retain their shape.

We took the requirements of EN 14404 into account whilst developing our knee cushions, so that we are now able to get certification for various trouser/knee cushion combinations.

The knee cushions are made of special cellular rubber, washable up to 90°C and can be dry cleaned.

SUITABLE FOR EN 14404 / TYPE 2

CERTIFIABLE IN COMBINATION WITH TROUSERS

The inserts with this logo attached fulfil all basic requirements to comply with EN 14404; they can be certified in combination with working trousers if these conform to the standard.

In accordance with standard 98/686/EEC, knee cushions are subject to EN 14404 (valid since 2005). The cushions belong to type 2 of the regulation:

The legal body intends the testing to apply to the complete system of cushion in combination with the respective working trousers.

Ask us - we will gladly advise you and get certification on your behalf.

For working trousers, dungarees and boiler suits with pockets for knee cushions.

INSERTABLE KNEE CUSHIONS

KNEE CUSHIONS FOR WORKING TROUSERS

High-grade professional quality, certifiable according to EN 14404!¹⁾ The cushions quickly adjust to the individual shape of the knee, are extremely easy to look after, comfortable and have a high longevity.

1) applies to EuroPAD and Universal Maxi-16

- can be dry cleaned
- cushions can stay within trouser pockets during cleaning!

BACK SUPPORT BELTS

BACK SUPPORT BELTS RECOMMENDED BY OCCUPATIONAL PHYSICIANS

Effective relief for the whole back. The ergonomic shape supports back and abdominal musculature, lumbar vertebrae and spine.

An especially light-weight and breathable nylon weave with Velcro® fasteners and braces ensures comfortable wear.

A 'must have' for all professions that involve straining the back.

Inspired by users, developed by experts, realized for professionals!

BECAUSE YOUR BACK REALLY HAS A SUPPORTING ROLE ...

Many activities in industry and trade require heavy loads have to be lifted and work to be done which puts strain on the back. As the static axis of the body, the spine is therefore exposed to extreme strain. This frequently leads to wear and tear that exceeds the average and often bring about severe complaints.

The back is a unique work of art, that is unmatched as regards mobility, resilience, stability, shock absorption and protection.

Disorders of the back do not only represent a major problem from a human standpoint but also from an economical one. In occupational medicine back pain is one main complaints. It often leads to long term absences from work and frequently to complete occupational invalidity.

...OCCUPATIONAL PHYSICIANS RECOMMEND...

Unions, company medical officers and occupational physicians recommend wearing a back support belt to support the spine and to reduce strains leading to injuries.

The results of many representative studies have shown that wearing a back support belt consistently can reduce the number of injuries and accidents at work dramatically.

...WEARING A BACK SUPPORT BELT!

Extra wide Velcro® fasteners allow the back support belt to be optimally and individually adjusted. An elasticated back permits unrestricted freedom of movement, even when the belt is pulled tightly. Four plastic supports worked into the fabric keep the belt's shape and stabilize the spine. Best breathability of the elasticated nylon weave, light weight and easy handling thus promotes more comfortable and healthier working conditions.

We at KNEETEK therefore recommend:

Minimize the dangers of back injuries and protect your spine by wearing our ergonomical back support belt BR 108!

More information at www.kneetek.com

The Quick-Fasten Back Support from KNEETEK!

Back protection can be this easy, simple and fast:

1-3 After you have put on the braces, please close the inner support belts. Make sure it fits tightly but comfortable!

4-6 With the external elasticated Nylon straps you will increase the stability of the whole belt and you can adjust it according to your individual preferences and the task at hand.

Important advice: Keep the belt tightened only during active work and release the outer straps when the strain is gone.

Back support belt

BR 108

- supports the back musculature
- stabilizes lumbar vertebrae and the spine
- minimizes tensions and wear and tear
- promotes better posture which helps to stay healthy
- wide Velcro® fasteners for individual adjustment
- easy handling
- high comfort of wear
- washable

size M
78-102 cm

size L
82-105 cm

size XL
98-128 cm

size XXL
109-137 cm

Available in black. Other colours on enquiry.

“The Supportive One”

The **BR 108** is a high-grade and robust back support belt that conforms to the back's anatomy. Its flexible shape is reinforced with plastic bars, similar to a corset, which support the whole back. It is manufactured from breathable materials, easy to handle and can easily be worn above or under the clothing.

Adjustable Velcro® fasteners on the inner straps and two lateral straps on the outside can be individually

fine-tuned to each body shape, thus providing a perfect fit. The **Back Support Belt BR 108** is washable up to 30°C (with closed Velcro® fasteners). Please wash before first use.

Safety advice:

If you have any health concerns, please consult your doctor before using the belt. Do not use the belt if you are pregnant!

Art.: BR 108

GUIDE ON KNEE PROTECTION

IT DOES NOT HAVE TO COME TO THIS!

According to a statistic from the German Builder's Union in Germany, there were 75.567 accidents reported in 2005 involving knee joints and lower legs. This alarmingly high number makes it clear why safety standards and guidelines like EN 14404 are necessary and have been put into place.

On the one hand there is an increased risk of accidents/injuries due to skin injuries, abrasions, injuries through mechanical forces, fractures of knee caps, pressure paralysis, chemical burns and allergies, etc.

On the other hand wear and tear and chronic illnesses are typical symptoms of kneeling activities, i.e. bursitis, damaged cartilages, gonarthrosis, etc.

PREVENTION IS BETTER THAN A CURE!

TIP 1: *Kneel only when absolutely necessary.*

Change to a squatting position from time to time.

TIP 2: *Good knee protection makes your work easier and, at the same time, protects against*

- a) excessive pressure on the bursas,
- b) injuries and knocks,
- c) cold and moisture,
- d) direct contact with harmful materials.

TIP 3: *Safeguard and look after your knee joints!*

- a) Keep your knees dry and warm.
- b) Boost your circulation at regular intervals.
- c) Get up occasionally and stretch your legs.
- d) 'Walk on the spot' at regular intervals.
- e) Use aids for carrying and lifting.
- f) Use two people to carry heavy or awkward loads.
- g) Use the right techniques for lifting.
- h) Strengthen your thigh muscles through daily exercises.

THINGS YOU SHOULD ALWAYS CONSIDER WHEN CHOOSING KNEE PADS!

SHAPE: Is the knee pad shaped so it does not compress knee caps or bursas?

FASTENING: The straps/fittings should not cut into the back of the knee!

ENVIRONMENT: Do method of manufacture and coating material allow air to circulate freely and do they regulate moisture well?

CUSHIONING: Is the pad made of soft, long-lasting elastic material? (Look out for possible pressure areas, good stability of the sides and freedom of movement).

PROTECTION: Does the front of the pad provide sufficient protection from sharp and pointed objects like nails or glass shards?

INSULATION: Is the knee pad made of material that really protects against cold and moisture?

COMFORT: Is the pad made of comfortable material, is it pleasant to wear and easy to put on?

QUALITY: Beware of false economy; is the pad high-quality and well made?

EN-STANDARD: Has the pad been certified according to EN 14404?

EN 14404 & PPE

STANDARD EN 14404 CAME INTO EFFECT IN 2005.

BUT WHAT DOES THIS STANDARD MEAN AND WHAT SHOULD USERS, TRADERS OR EMPLOYERS TAKE INTO ACCOUNT?

General information

EN 14404 "Knee protection in the kneeling position" was published and came into effect in February 2005. It defines knee protection as personal safety equipment (PPE) according to guideline 98/686/EEC.

PERSONAL PROTECTIVE EQUIPMENT is legally defined as: "...devices and means that are meant for defence against and reduction of dangers to a person's health and safety, and which are worn on the body or parts of the body..."

For the implementation of EN 14404 certain requirements and test procedures were laid down. An accredited and certified testing centre must conduct a type examination and attest that the product complies with the requirements of EU guideline 98/686/EEC and thus also with EN 14404.

The new standard differentiates between 4 types and 2 levels of performance:

- Typ 1:** Knee protection that is independent from other clothes and is fastened to the leg.
- Typ 2:** Knee protection that is inserted for example into pockets in trouser legs,
- Typ 3:** Equipment that is not fastened to the body,
- Typ 4:** Knee protection that is part of other devices with additional functions, i.e. a frame to help you get to your feet.

Furthermore two levels of performance are defined:

Level 1: for work on level surfaces

Level 2: for work in severe conditions, for instance kneeling on stones in mines and quarries.

The standard lays down minimum values for the dimensions of the zones of protection, as well as mechanical requirements such as penetration resistance, force distribution and the peak transmitted force in impact. In addition requirements for the means of restraint and for comfort during use are specified. Requirements for the labelling of knee protectors and the information supplied by the manufacturer (to ensure that the protectors are used as intended) are also given.

Duty to label

Knee protectors have to be labelled at least with the following information (in the official language(s) of the country of destination):

- On knee protectors of type 2 sown into the trouser legs, the labels have to present on the trousers as well;
- The name or brand of the manufacturer or his authorized representative in an EU country or the country that the product is sold to;
- Article description, type according to the standard, brand name or code that uniquely identifies the item;
- Size of the article/item;
- Reference number of certification and level of performance;
- Identification of inner (or outer) surfaces of knee protectors type 2;
- If relevant, body area that the protection should be worn on;
- Instruction to read the manufacturer's product information.

Important for Users

According to current law only knee protectors that fulfil the requirements of EN 14404 are allowed to display a CE sign. Unfortunately this is not always the case in reality. Many manufacturers shy away from the costs, the effort and/or the risk of not passing the official type examination.

This means for the consumer: When buying, ask about EN 14404. **Caution! Neither the CE sign nor the note "manufactured according to EN 14404" are proof, that a type examination has been done.** If you want to make certain, have the retailer show you evidence for fulfilling the requirements of the standard (certificate of type examination)

Important for Employers

As an employer you are especially obligated to observe health and safety regulations.

Provide your employees only with knee protectors that are certified according to EN 14404. On the one hand this will give you the certainty that your employees are well protected and that the risk of work loss due to accidents and illness has been minimized. On the other hand you have the certainty of having complied with all legal requirements, just in case! Because, should anything happen to one of your employees (accident involving knee or knee-related illness), you could be held responsible and sued.

When buying or ordering knee protection, either you or your health and safety officer should make sure that the certificate proving adherence to the standard, is valid. The CE sign should be present in any case, but on its own is not enough. Insist on seeing proof (certificate of type examination)! The retailer has to provide this evidence.

Important for Trade and Retailers

The regulations of EN 14404 also apply to the sale/retail of knee pads or insertable knee cushions, whether as personal safety equipment or work wear.

A trader/retailer is legally obligated to sell only products that conform to the standard; this means the products have to meet the health and safety requirements. The authorities have the option to stop any further retail if violations occur. They can, for instance, impose sanctions and fine the trader/retailer.

Additionally civil suits can be brought, i.e. cease-and-desist warnings from competitors or demands for compensation from users if injuries/damages can be proven to be due to faulty/flawed products.

Ascertain with the manufacturer or wholesaler that the product has the CE sign. You should also insist on proof that the respective certificate of type examination from an accredited testing centre exists (as with KNEETEK products).

Terms and Conditions – general terms of delivery and payment of the KNEETEK company, Cologne

1. General

Our terms and conditions apply exclusively; we do not recognize contradictory or differing conditions of a trade partner (TP), unless we have agreed to them in writing.

2. Offers, completion of contract, contents

2.1 We can retract our offers at any time either by telephone, fax or e-mail, until the legally binding acceptance by the TP. Orders from the TP can be accepted by us within two weeks either through written order confirmation or delivery of the product. The order can also be confirmed by fax or e-mail.

2.2 Our quotes can only be accepted immediately. If the TP accepts after the term of acceptance has expired, it will be regarded as a new order.

2.3 Information on prices, measurements, weights etc in catalogues, brochures, internet sites, memos, advertisements, pictures and price lists are non-binding, unless they expressly become subject matters of contract.

2.4 We reserve the right to make technical changes to the merchandise, if these do not affect the technical function and do not represent an unacceptable impairment for the TP. Discrepancies in materials and colours due to production are acceptable within a consignment, as long as the materials are equal to each other, colour discrepancies are minor and the TP can be expected to accept them.

3. Prices and netting, right of retention

3.1 Our prices are trader's prices and therefore net prices plus German VAT and packaging. For end consumers the prices include VAT and packaging.

3.2 We are bound by the agreed prices, if the merchandise or the agreed service is delivered / rendered within 4 months of entering the contract. If the agreed delivery time is unacceptably long we are entitled to change prices accordingly, if costs rise or fall (especially due to tariff changes or change in the price of materials) after entering the contract. We will provide proof of these cost changes if the purchaser so wishes. The same applies to transport costs. The TP can withdraw from a contract, by written declaration within two weeks of receiving notice of the price increase if the rise in costs is more than eight percent of the net price.

3.3 The TP is not entitled to any claims against us, unless the claim has been accepted by us or has been legally established.

3.4 The TP can only claim a right of retention on account of counter claims that stem directly from the respective contract.

4. Delay, compensation,

4.1 The agreed delivery time will be extended, if the TP does not deliver/make available the documents, information or other services to be provided by him available in time.

4.2 When delivering to a trader, if we can prove that, despite careful choice of subcontractors and completion of contracts with appropriate conditions, we have not received our goods on time, the delivery time will be extended by the amount of time that the goods have been delayed. The same applies to all TPs, if delivery is delayed by acts of god or, despite careful organisation, hold-ups result from i.e. storms, industrial actions, unpredictable restriction in commercial law or other events, that we have no influence over.

4.3 In case of proven inability of the subcontractor to deliver, we are entitled to withdraw from the contract.

5. Payment by the TP

5.1 Orders from abroad if not otherwise provided we accept only with prepayment. or L/C.

5.2 Payment has to be made without deduction immediately on receipt of the invoice, unless explicitly agreed otherwise.

5.3 The TP will default on payment within 30 days after the due date and receipt of an invoice (or other equal demand for payment), unless he has already received a reminder.

5.4 In case of default we have the choice of charging interest to the amount of the bank credit interest as calculated by us or up to 5% above the respective basic interest rate (§ 1 DUG, § 288 Abs 1 BGB).

5.5 Every reminder will be charged at a flat rate of 5.00 EURO

6. Transfer of risk

6.1 If the merchandise is to be sent to a different delivery

address on order of the TP, any danger of accidental loss or deterioration of the goods by handing them over to a haulier, carrier, forwarding agent or collector representing the TP, becomes responsibility of the TP, if the TP is a entrepreneur according to § 14 BGB. This also applies if we pay the freight and/or ship the merchandise ourselves.

7. Compensation for non-fulfilment

Whenever we are entitled to compensation on accord of non-fulfilment by the TP, we can demand 20% of the order value as compensation, without providing proof. This does not affect the TP's right to provide proof of a lesser loss and our right to provide proof of a higher loss.

8. Reservation of proprietary rights

8.1 We retain ownership of the merchandise until the full price has been paid, including eventual other claims according to the delivery contract and any other demands arising from the business relationship. When dealing with traders we will furthermore retain ownership of the goods until all, even future, payments arising from the business relationship have been met.

8.2 The TP is not allowed to resell the merchandise until full payment has been received. If it is customary for the TP to resell our goods to third parties, he is exceptionally authorised to do so in due course of business before full payment has been made. In case of permitted or unauthorized sale of merchandise the TP will already assign all sums (incl VAT) to us which arise from the sale to the buyer or third party. This applies whether the goods have been sold without alterations or after alterations have been made. In case of an authorised sale the TP is permitted to collect the claim. Our permission to collect the claims ourselves remains unaffected by this. But, in case of an authorised sale, we are committed to not collect the claim ourselves, as long as the TP meets his obligations to pay us and if he is not behind on his payments.

8.3 We commit ourselves at this point in time to refund securities of choice if the realistic security value of the accounts receivable surpasses the outstanding debts by more than 10%.

8.4 We can collect assigned receivables directly from third parties. Amounts receivable that have been collected will be applied against the purchasing price (minus expenses and interest) and any surplus handed over to the TP.

8.5 The TP has to take due care of the merchandise. In particular, he has to insure it adequately against fire and water damage and theft at his own cost. He has to properly maintain the goods and inform us of any change of address of either private residence or business premises. The purchaser is obligated to surrender any claims that may arise from the insurance from himself to us. If this transfer requires the consent of the insurer, the TP has to obtain this immediately and inform us. Breach of contract by the TP to an extent that compromises the interests of the seller, entitles us to withdraw from the contract. The same applies if the TP defaults on his payments. The TP has to return the goods at his own costs and loses ownership. Our right to demand compensation remains unaffected by this. In case the merchandise has been sold to a third party which breaches the contract (especially payment arrears), the TP has to inform us immediately in writing of the assigned claims and the debtor, provide details on how to collect the claim, pass all relevant documents on to us and inform the third party of the transfer.

8.6 If the merchandise is impounded or third parties otherwise intervene, the TP has to inform us immediately in writing and has to forward all documents needed for an intervention to us. If the third party is unable to pay for costs, the TP has to pay all legal and other costs that accrue while access is suspended and the goods are recovered, especially in case of a suit according to § 771 ZPO. This does not apply if the costs are disproportionately high compared to the value of the merchandise.

9. Complaints/Warranty

9.1 Defects, discrepancy of amount(s), and differences in appearance of the merchandise which are so obvious, that they are apparent even to the non-expert TP, have to be immediately reported to us in writing after arrival at the destination, otherwise the warranty will expire.

9.2 The rules of HGB remain effective for traders.

9.3 Warranty claims come under the statute of limitations within 24 months for consumers (§13 BGB) and 12 months for traders (§ 14 BGB).

9.4 If the merchandise is comprised of used items, and if these are explicitly sold to the TP as used, the delivery to traders is exempt from warranty (§ 14 BGB).

9.5 If the merchandise is faulty at the point in time when risk is

transferred to the TP (if he is a trader according to § 14 BGB), we are entitled to rework at least twice (our choice), more times if it can be expected of the TP. If the reworking fails, we have the right to re-deliver at least twice. The TP's statutory rights remain unaffected by a faulty re-delivery.

9.6 The TP can not claim warranty if faults are caused by improper treatment or over-use by the TP or a third party.

9.7 If the TP incorrectly claims warranty from us (i.e. because of incorrect or improper use of the merchandise, non-existent faults), the TP has to pay all costs arising from the examination of the merchandise.

10. Compensation and withdrawal of the TP from contract

10.1 Claims for compensation on account of default (§§ 280 Abs.2, 286 BGB), faulty merchandise, breach of contract, indebtedness at signing of contract precontractual liability (§ 283 BGB), other breach of duty (§ 280 Abs. 1 Satz 1 BGB) or illegal action against us are excluded, unless in a case of reckless or premeditated action. The same applies to the right to withdraw from a contract (§ 323 BGB). The above non-liability does not apply in cases of culpable breach of contractual duties or of injuries to life, limb or health.

10.2 Compensation is limited to replacement of the typical and predictable damage (at signing of contract), if there is no deliberate breach of contract.

10.3 This limitation applies to traders for all types of faults.

11. Place of jurisdiction and execution

11.1 The laws of the Federal Republic of Germany apply to this contract and the legal relationships between all parties, excluding the UN convention on contracts for the international sale of goods (CISG).

11.2 Cologne is the place of jurisdiction for all claims arising from the business relationship for traders and TPs without domestic place of general jurisdiction. Place of execution is the place of the business.

12. Right of rescission

Consumers can cancel their declaration of contract in written form within two weeks without stating reasons (i.e. by letter, fax or e-mail) or by returning the merchandise. If the instruction on recession is given after the signing of contract, this period of time is extended to one month. The time period starts at the earliest after the instruction is given in written form, but not before the day of delivery of the merchandise. To keep the right of recession it is sufficient to send the rescission/return the merchandise within the period stipulated. The recession should be addressed to:

Kneetek
Klaus Bachmann
Bahnhofstr. 14
D-51143 Köln
Tel: +49 (0) 2203 935666-0
Fax: +49 (0) 2203 935666-30
info@kneetek.com

In case of an effectual recession both parties have to return any services rendered as well as any uses profited by (if any). The consumer has to reimburse Kneetek, if he can not return rendered services either at all, only partially or only in deteriorated condition. This does not apply, if the deterioration in condition is due to examination of the merchandise only, as is customary for instance in shops. Apart from this, the consumer can avoid reimbursing the seller by treating the merchandise not as his own property and avoiding everything that could reduce its value.

Merchandise posted as packets has to be returned complete and in immaculate condition (including all intact packaging) as an insured parcel to the return address specified in the invoice. Merchandise that can not be sent as a packet will be collected by a courier from the consumer.

The consumer has to pay the cost of returning the merchandise, if the delivered goods correspond to the order and if the price of the merchandise to be returned does not exceed 40,- Euros. This also applies if the price of the merchandise is higher but the consumer has not paid at least part of the agreed price or delivered a return service at the time of recession. In all other cases returning the goods is free and Kneetek will reimburse the consumer for cost of postage together with the purchase price.
